

ENERGY POLICY

As Sanipak, our aim based on the principles of "respect for the individual, society, and nature" is to ensure the continuous improvement of energy performance by integrating energy efficiency and the use of renewable energy into our strategy. In pursuit of this objective, our commitments are as follows:

- To comply with national and international energy-related legal regulations and other obligations applicable to our activities.
- To adopt community standards, internationally accepted principles, and best practices, in cases where there is no specific legislation.
- To identify energy-related risks and opportunities in our processes and utilize the outcomes in determining business strategies to keep risks under control.
- To use energy, raw materials, and natural resources efficiently in our processes.
- To encourage the diversification of energy sources and promote the use of renewable energy sources.
- To target safe and efficient energy use and conduct energy efficiency initiatives.
- To encourage our employees, suppliers, subcontractors, and other external stakeholders to approach energy-related processes with a similar awareness and carry out training, information, and communication activities.
- To focus on continuous improvement to advance our energy performance and ensure the accessibility of necessary resources and information.
- To integrate alternative new technologies and digital applications into our processes, taking into account sector dynamics.

· To consider energy efficiency in investment decisions, the selection of machinery, equipment, and services, and the design and revision of products and production processes.
